Maze
37 people; 2,262 windows
Real walking + dual task
Simulations
25 people; 2,980 windows
Five VR environments
Terrain
22 people; 1,159 windows
Seated joystick steering
Harmonization
1 Hz sampling
14 shared eye/head signals
30-s windows; 15-s stride
6,401 windows (v1.1)
84 identifiers
Participant-held-out
58 / 9 / 17 identifiers
No identifier is in two splits
Primary transfer estimate
Purged blocked split
84 identifiers in all sets
Chronological 60/20/20
15-s boundary purge
Single-task binary
47 IDs; 5x5 repeated CV
AUC 0.634; env.-only 0.677
Within environment 0.487
Architecture study
7 models; 2 protocols
3 seeds = 42 runs
Regression and AUC
