

Maze

37 people; 2,262 windows
Real walking + dual task

Simulations

25 people; 2,983 windows
Five VR environments

Terrain

22 people; 1,197 windows
Seated joystick steering

Harmonization

1 Hz sampling
14 shared eye/head signals
30-s windows; 15-s stride
6,442 windows; 84 identifiers

Participant-held-out

58 / 9 / 17 identifiers
No identifier is in two splits
Primary transfer estimate

Purged blocked split

84 identifiers in all sets
Chronological 60/20/20
15-s boundary purge

Single-task binary

9 held-out people
768 windows; AUC 0.757
Cluster CI 0.696-0.814

Architecture study

7 models; 2 protocols
3 seeds = 42 runs
Regression and AUC
